PROFESSIONAL SUMMARY

Full-stack Developer & UX UI Engineer with 7 years of professional experience specializing in designing scalable, user-friendly web applications. Experienced in modern JavaScript frameworks like Vue.js and React, as well as backend technologies like ASP.NET and MVC. Database knowledge with SQL and stored procedures. Proven track record in building reusable component libraries, optimizing UI/UX performance, and modernizing legacy systems to enhance maintainability.

SKILLS

Languages: JavaScript, TypeScript, C# .NET, HTML, CSS, SQL

Frameworks: React, Next.js, Vue 3, ASP.NET Core, MVC, Tailwind CSS, Bootstrap

Tools & Environments: GitLab, GitHub, Visual Studio, VS Code, SSMS, Storybook, Chromatic, JIRA

Backend & Databases: RESTful APIs, SQL Server, Stored Procedures, Entity Framework

Testing: Cucumber, Selenium, Usability Testing

Methodologies & Design: Agile methodology, Responsive design, Prototyping, Design Systems, Accessibility, Documentation

WORK HISTORY

UX Engineer — Sera | Dallas, TX

Nov 2024 – Oct 2025

- Architected and developed a production-ready Vue 3 component library, accelerating multi-app development cycles and guaranteeing system-wide UI consistency.
- Engineered isolated component testing pipelines utilizing Storybook, significantly improving code reliability and cross-functional handoffs.
- Automated visual regression testing by integrating Chromatic into CI/CD workflows, eliminating visual regressions and safeguarding interface quality.
- Translated complex, interactive Figma specifications into highly modular, accessible reusable code, reducing design-to-development discrepancies.
- Collaborated with engineering teams to seamlessly integrate UI components, accelerating feature velocity and reducing downstream style bottlenecks.
- Established an optimized handoff and feedback protocol between design and engineering to drastically streamline iteration and velocity.
- Spearheaded systematic usability analysis and application audit testing to maximize user intuition and enforce exact design fidelity.

Software Developer — Car Capital Technologies | Grapevine, TX

Oct 2020 – Nov 2024

- Led the modernization of legacy web systems, refactoring out-of-date architectures into modern React and Next.js SPAs to significantly boost runtime performance.
- Designed and developed a business-critical, multi-page auto-finance software application using ASP.NET Core and C# .NET, optimizing complex transactional workflows.
- Honored with the Performance-Driven Employee Award for cross-functional agility, managing dual roles to sustain uninterrupted velocity during team leaves.
- Partnered directly with product stakeholders within an Agile environment to map technical requirements to clean, scalable full-stack software solutions.
- Mentored junior developers on MVC patterns, architectural standards, and codebase engineering, accelerating overall team delivery capacity.

UX/UI Developer for BNSF Railway — HCL Technologies | Fort Worth, TX

Feb 2019 – Oct 2020

- Developed robust, cross-browser responsive UIs using React.js, Bootstrap, and JavaScript, mapping intricate interactive wireframes to clean code.
- Optimized enterprise field application layouts, identifying user friction points via structured collaboration with product managers.
- Enforced strict codebase health and design consistency through thorough code reviews and collaborative software engineering standards.
- Programmed end-to-end automated test suites using Selenium and Cucumber alongside comprehensive unit tests to achieve high reliability.

EDUCATION

University of North Texas | Denton, TX

Sep 2013 – Dec 2017

Bachelor of Science in Computer Science • Dean's List
